

LAN-to-LAN Router

The following information is required to customize your router:

DELTA LOGIC Connectivity Service

1. Customer name or Instance ID*:
2. Freely selectable device name:
3. Accessible by netmapping or directly accessible: Directly Netmapping

Plant network

4. Local IP address:
5. Local net mask:
6. Net mapping IP address:
(only necessary if netmapping active)
7. Enable DHCP server? YES NO
8. DHCP range:
(only necessary if DHCP active)

External network

9. DHCP client YES NO
10. IP address on the LAN(ext) interface:
(only necessary if DHCP is not active)
11. Standard gateway:
(only necessary if DHCP is not active)
12. DNS server:
(only necessary if DHCP is not active)

*you can find your instance ID and customer name in the DELTA LOGIC Connectivity Service Portal under the "My VPN Hub" tab.

IMPORTANT: After the account has been activated in the DLCS, you can see which ports are used for the VPN-Connection under the "My VPN Hub" tab. VPN-Clients have to be able to build an outgoing connection to the VPN-Server by using the given UDP-Ports. If necessary, they have to be enabled by your system administrator.
